

SPECTRADOME PRIVAGLASStm

000

SPECTRADOME PRIVAGLASS is a revolutionary LCD glass system which is actually two products into one because it can be used as a piece of furniture as well as an extremely effective shield for your privacy.

SPECTRADOME PRIVAGLASS LCD glass and windows are made in Italy and based upon SPECTRADOME Switzerland LCD technology, which has made availability of a truly advanced LCD window and glass system possible.

Advantages offered by our LCD glass technology are many:

- it is an eco-friendly product. System allows rejection of IR and UV radiation: this keeps your indoor environment proportionally cooler in summer and warmer in winter;
- generic compatibility with any type of door or window frame;
- relatively fast installation;
- fully customized manufacturing of glass slabs even for very small window dimensions;
- excellent transparency;
- extremely easy to use once installed.

Available in four different LCD blends, (ranging from milky white to dark grey/black colour with mirror effect), our LCD glass and windows are manufactured on full custom order in almost any glass type and thickness: thermopane, shatterproof, armored glass, bulletproof glass, acoustic-proof glass in order to fulfill virtually all of our client's needs.

Our highly skilled installation crew is able to perform LCD glass installation in almost any condition and country of the world, even with already existing or mounted glass panes and frames.

Custom-made door or window frames are also available upon request and their installation can be handled by our personnel along with the LCD glass.

We are also able to turn ordinary glass into LCD glass without replacing the existing glass panes and a number of different customizations are available as long as the system operation and command is concerned: integration with domotics as well as radio frequency remote controls or infrared/radar sensors to control LCD glass system operation are all possible.

According to client's requirements, we are able to provide customized LCD glass solutions even in case of a large LCD glass surface is needed: our company is based in Switzerland and Italy and we specialize in the manufacturing of liquid crystal glass and windows, switchable LCD glass, one-way see-through privacy glass and multimedia LCD glass.

We are one of the very few companies in the world to offer these kinds of hi-tech products as real turn-key solutions, offering our clients one unique reference point from feasibility study to final system installation, no matter if it is a small LCD switchable window or a large building facade: we are convinced there could be no better warranty than this for all of those clients interested in purchasing our LCD switchable glass.

The LCD glass we manufacture and sell abides by the rules of the highest quality standards: we believe in excellence and try our best to materialize our beliefs in the products we sell.

In the below picture, a turned on PRIVAGLASS LCD glass pane can be seen: when turned on, the PRIVAGLASS LCD glass is totally transparent and it is possible to see through it.

The second picture below shows the same previous LCD glass slab turned off: liquid crystal molecules are scattered in a way that deflects most of the ambient light and see-through vision is impossible.

In these new pictures below, some of the most common applications for our PRIVAGLASS LCD switchable glass are shown: LCD glass installation is possible at home and office as well as in shops, hotels and even yachts and boats.

Some installation examples with system ON and OFF:

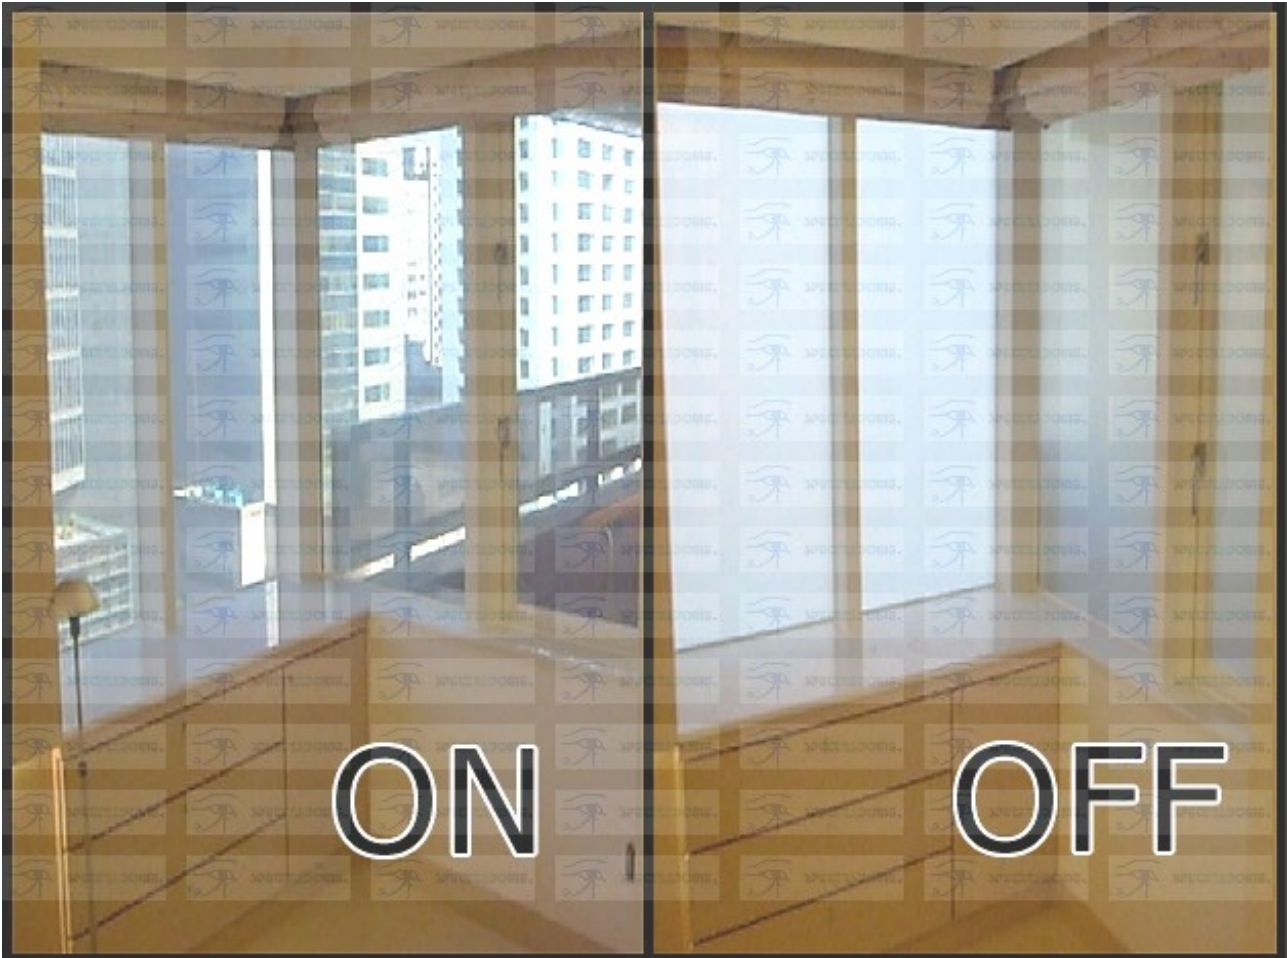

living room

luxurious shop----->

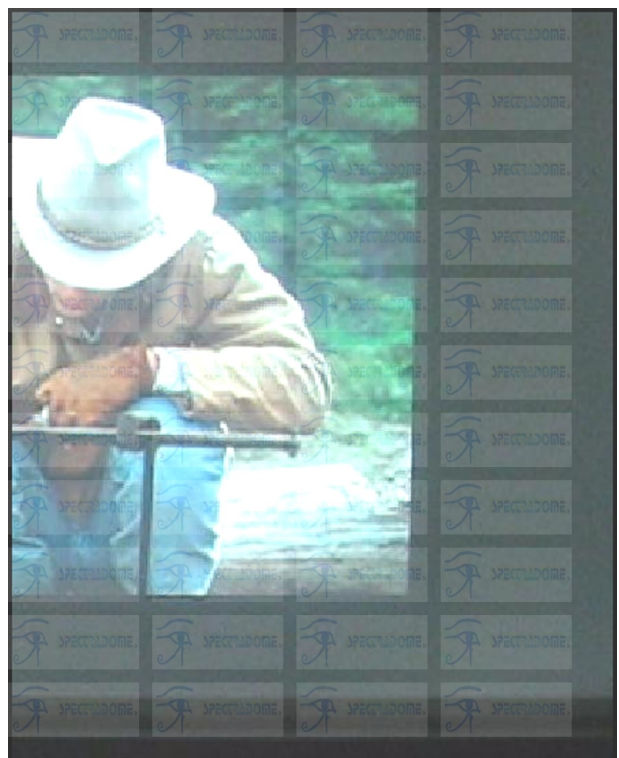

hotel room:

LCD projection ----->

As clearly shown in the aside picture, indoor LCD glass installations can turn any wall or window into a large home cinema screen when system is turned off.

Commercial advertisement use is also possible: we are able to provide our clients with customized LCD panels of large dimensions for LCD projection of images as well as video footage.

The aside pictures show LCD glass installation on a boat window: the upper picture shows a transparent window (LCD glass turned on) whereas the lower picture shows system in off status.

LCD installation on yachts and boats is not only feasible but also recommendable to avoid curtains and improve aesthetics, especially if the boat in question is expensive.

SPECTRADOME is able to provide fully customized LCD glass slabs and windows for virtually any type of boat door or window.
